

build^{ee} Salesforce App

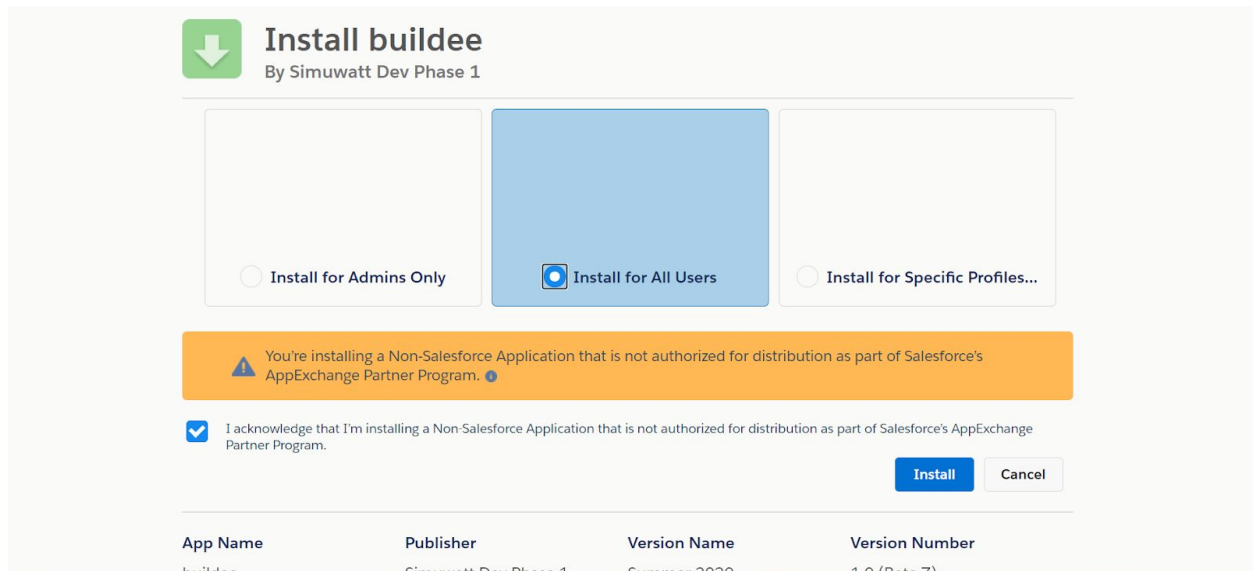

User Configuration Document

Overview

The build^{ee} Salesforce App enables you to connect build^{ee} with your Salesforce instance and import buildings, measures, projects and equipment data. Simply install the app, sign into your build^{ee} account, configure your Salesforce objects and fields, and enable syncing.

App Installation

To get started, click [here](#) to install the app. Once the app is installed, a build^{ee} lightning app will be created in Salesforce. If you receive any permission requests in the process be sure to confirm access. The app can be found in your app launcher.

The screenshot shows the Salesforce App Installation interface for the 'build^{ee}' app. At the top, there is a green download icon and the text 'Install build^{ee} By Simuwatt Dev Phase 1'. Below this, there are three radio button options: 'Install for Admins Only', 'Install for All Users' (which is selected), and 'Install for Specific Profiles...'. A yellow warning banner states: 'You're installing a Non-Salesforce Application that is not authorized for distribution as part of Salesforce's AppExchange Partner Program.' Below the banner, there is a checkbox labeled 'I acknowledge that I'm installing a Non-Salesforce Application that is not authorized for distribution as part of Salesforce's AppExchange Partner Program.' which is checked. At the bottom right, there are 'Install' and 'Cancel' buttons. Below the installation options, there is a table with the following data:

App Name	Publisher	Version Name	Version Number
build ^{ee}	Simuwatt Dev Phase 1	Summer 2020	1.0 (Beta 7)

Pre-Configuration Steps

After the app is installed, set-up access permissions:

1. Create and assign permission to the admin user
 - a. Go to permission sets and create a new permission set named 'build^{ee} app access'.
 - b. In the permission set, go to assigned connected apps, and assign build^{ee} connected app to it.
 - c. Go to manage assignments for this permission set, and assign this permission set to the admin user who installed the app and is configuring the app.

Enabled Connected Apps

buildee

- Go to setup, and then manage connected apps and click on edit policies.

3. Set OAuth Policies:

- a. Change permitted users to Admin approved users are pre-authorized.
- b. Set IP Relaxation to Relax IP Restrictions.
- c. Set refresh token policy to immediately expire refresh token.
- d. Click on save.

App Configuration Steps

Your next steps are to sign into buildee, configure objects and fields, and sync.

STEP 1: Configure Authentication

1. Open the buildee app from the app launcher.
2. Go to the App Configuration tab.
3. Enter your buildee credentials and click on verify.
4. Your authentication status will be set to authentication complete.

App Configuration

STEP 2: Mapping
Mapping Status: Mapping not confirmed
Configure Mapping

STEP 3: Data Syncing
Please complete step 1 and 2 first

STEP 2: Configure Mappings

1. When you install buildee app, the associated objects for buildings, measures and equipment are automatically created in your salesforce instance.
2. buildee app also allows you to use your own existing objects for building, project and measures if you want to reuse them and not use the app supplied objects.
3. If you want to use the buildee app supplied objects, go to Mapping Configuration tab and just click on Confirm Mapping to confirm the mapping.

Mapping Settings
Mapping Status: Mapping not confirmed

Confirm Mapping **Change Mapping**

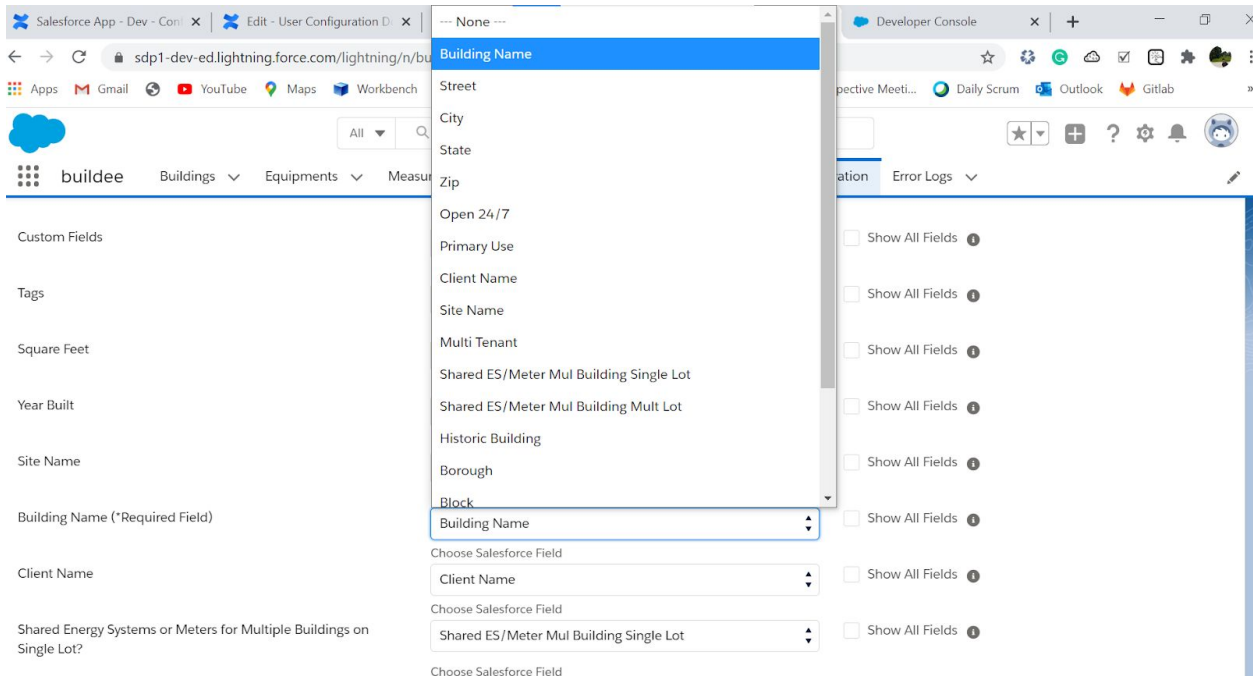

Building Mapping
* Choose Salesforce Object
Building **Save** **Configure Fields** **Hide Fields**

Equipment Mapping
* Choose Salesforce Object
Equipment **Save** **Configure Fields** **Hide Fields**

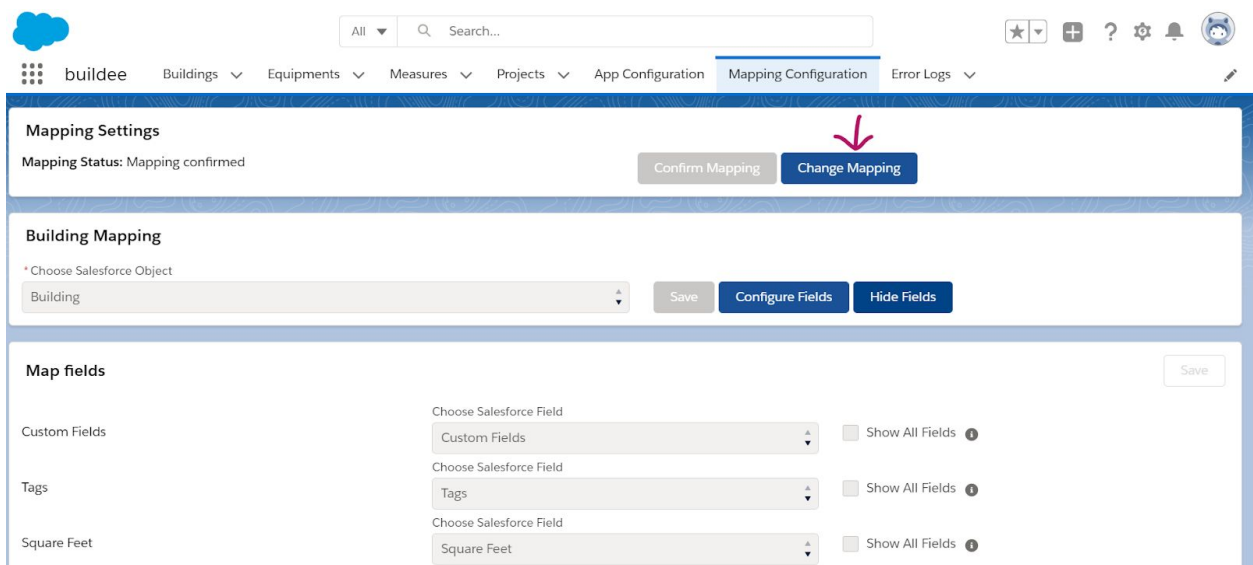

Measure Mapping
* Choose Salesforce Object
Measure **Save** **Configure Fields** **Hide Fields**

4. Want to use your own objects? You can configure this.
 - a. Go to the building, equipment, measure, or project mapping section and select configure fields. This will reveal a mapping of building fields and your objects.
 - b. By default, only compatible field types are shown but you can click on show all fields checkbox to see all the fields of the selected object to assign to. This can create problems in mapping, if for example you use a date field mapping when buildee stores data in string, etc.
 - c. It is mandatory to select a mapping for all required fields, and assign an external id field as mapping for each object ID field.
 - d. After field mappings are done for buildings, measures and projects, click on confirm mappings.
 - e. If there are any issues in your mapping the confirm mapping process will fail. The issues may be:
 - i. Some required fields are not mapped for some objects.
 - ii. Some lookup fields are not populated in the mapping.
 - iii. You are using a mix of buildee supplied objects and your own objects without creating fields to establish a relationship between them.
 - iv. Correct the issues and then confirm your mapping.

The screenshot displays the Salesforce Lightning Experience Mapping Configuration interface. On the left, a sidebar lists various objects, with 'Account' highlighted. The main content area shows the 'Mapping Configuration' tab, which includes buttons for 'Confirm Mapping', 'Change Mapping', 'Save', 'Configure Fields', and 'Hide Fields'. A red arrow points to the 'Save' button. Below this, there are sections for 'Equipment Mapping' and 'Measure Mapping', each featuring a dropdown menu and 'Save', 'Configure Fields', and 'Hide Fields' buttons.

5. Mappings can be edited at any time. We recommend pausing the sync during this process to avoid undesired mappings.

6. After editing your mappings, click on confirm mapping to reconfirm mapping and do STEP 3 again.

STEP 3: Data Syncing

1. After completing steps 1 and 2, go to the App Configuration tab.
2. Click on enable data syncing.
3. After this is enabled, an initialization will happen to get all the records you have access to. And any time buildee data is updated, it will be reflected back to salesforce.

The screenshot shows the 'App Configuration' tab in the buildee interface. It displays three steps: 'STEP 1: Authentication' (completed), 'STEP 2: Mapping' (completed), and 'STEP 3: Data Syncing' (in progress). A red arrow points to the 'Data Syncing' section, which contains a toggle switch labeled 'Enabled' that is currently turned on. The interface also includes a search bar, navigation tabs, and various utility icons.

buildee Salesforce App Objects

The app consists of following tabs:

1. Buildings
 - a. This contains all the buildings that have been imported from buildee.
 - b. This tab will contain data only if you use buildee objects from the app itself and have not changed the mappings.
 - c. If you have changed the mappings, your data will be available in the object that you mapped buildings to in STEP 2.
2. Equipment
 - a. This contains all the equipment that have been imported from buildee.
 - b. This tab will contain data only if you use buildee objects from the app itself and have not changed the mappings.

- c. If you have changed the mappings, your data will be available in the object that you mapped measures to in STEP 2.

3. Measures

- a. This contains all the measures that have been imported from buildee.
- b. This tab will contain data only if you use buildee objects from the app itself and have not changed the mappings.
- c. If you have changed the mappings, your data will be available in the object that you mapped measures to in STEP 2.

4. Projects

- a. This contains all the projects that have been imported from buildee.
- b. This tab will contain data only if you use buildee objects from the app itself and have not changed the mappings.
- c. If you have changed the mappings, your data will be available in the object that you mapped projects to in STEP 2.

5. App Configuration

- a. This tab contains the information for STEP 1, 2 and 3 mentioned earlier.

6. Mapping Configuration

- a. This tab is responsible for performing the actions specified in STEP 2.

7. Error Logs

- a. Any errors generated during using the app will be recorded in error logs.
- b. An error can happen if the data sync could not happen due to field mismatch, or validation rules, or any other reason.
- c. The error log will contain an object id of the buildee record which could not be synced correctly.
